

We as a Wireless Internet Service provider work extremely hard at building out services to those in areas that do not currently have service. These areas most likely would not have conventional services such as dsl or cable Internet anytime soon. We strongly support the proposed rule of allowing unlicensed operations in the unused TV spectrum. The TV spectrum would allow us to reach these areas more efficiently because of the ability of the spectrum to penetrate current obstacles that hinder propagation of the current spectrum now available to us. We also urge that this spectrum be allotted for use by wireless service providers only, so we have the assurance of interference free operations.
